

HF 504 R Halon-filling machine for Halon 1211/1301

Halon filling machine for filling Halon portable fire extinguishers of all sizes and makes. The Halon transfer machine is designed in such a way that optimal operation is guaranteed with just a few

operations. The Halon fire extinguishers are refilled using a sensor-controlled scale, which switches off automatically when the fill level is reached

After reaching the filling weight, nitrogen is added. The clearly visible manometers for Halon and Nitrogen as well as the valves are easy to operate and monitor during the work process. The HF-504-R is equipped with a high-performance feed pump, which guarantees that large bottles can be filled quickly using a separate floor scale.

The HF-504-R offers the recovery of Halon 1211 and Halon 1301 through the special feed pump.

TECHNICAL DATA

Dimension (l x w x h)	900 mm x 1100 mm x 1150 mm
Drive	3-phase, 230 V / 400 V, 50 Hz
Rated capacity	12,5 kW
Feed pump	liquid pump
Delivery rate	8 kg/min
Gehäuse	steel structure with metal cladding
Scale	digital or running weight
Colour	hammer finish painted blue
